

Unit: FIT3161-63 Week: 5, S2-23

Workshop Worksheet

Coffee Machine software update for accessibility to visually impaired users. Break Activity 2: Read the following journal: Agile Project Management: Steering from the Edges Discussion: 1. The APM framework prescribes the six practices for managing agile development projects. Identify these six practices and discuss why they are essential to successfully manage agile projects. 2. Refer to the APM Case Study at the bottom of page 87 of the ACM journal (Page 3 of 5 of the extract). An eight-member advisory implementation team led the recovery and stabilization of a large mission critical product-development project involving a team of more than 120 IT and services professionals in multiple locations. Discuss what was done to resuscitate the project and what are some of the lessons learned from this case.	Unit announcements (if any)		5 mins
